

Information Sheet No. TFD-2021-14

FLUSH PANEL ARCHITECTURAL DOORS (NON-FIRE RATED)

General Description

Tasmanian Fire Doors manufacture a large range of hollow, solid and poly core flush panel doors, to suit the broad variety of building industry requirements. Door dimensions can be manufactured to meet your specifications.

Applications

Tasmanian Fire Doors can provide many options for facing materials which include MDF, Ply, Duracoat, Laminate, PVC, Metal Clad and a wide variety of specialty veneers for clear finishing.

Glass openings can be cut into flush panel doors including square, rectangular, porthole and custom designed shapes. An extensive range of glass can be factory installed using square or splay glazing beads.

Additional preparations to your door that are available include cut outs for air grilles, conduit preparation, recessing for concealed door closers, and acoustic seals.

Commercial quality or high traffic areas can be fitted with solid timber edge strips, to protect against impact to the door edges. For doors that are highly exposed to weather, we recommend our metal clad range.
